Imagine the possibilities: a surfacing material that gives you design versatility, renewability and repairability, with the ability to virtually eliminate seam issues.

Our 100% acrylic solid surfaces is ideal for a wide range of applications, where you need a surface that looks good, performs well, and provides options that no other surfacing material can.

Over the years Wilsonart 4mm SSV material has become the preferred option providing all the advantages of traditionally thicker solid surfaces. By simply re-engineering the fabrication process Wilsonart SSV can create the same look and performance but at a fraction of the cost.

The non-porous surface is resistant to stains and is easy to maintain, it requires no surface sealants or costly day-to-day maintenance.

Solid Surface Features & Benefits

- Non-porous eliminating the risk of stains
- Renewable and repairable surface ensuring longevity in performance
- Hygienic surface resistant to water, mould and bacteria – ideal for medical and food installations
- Shapes and curves can be created for an overall moulded look
- Opens new design opportunities for previously limited stone applications
- Dry cutting for on-site installation
- Achieve seamless joints to create a continuous, smooth finish

Please note darker colours are more likely to show scuffs and scratches, however, they can be repaired and sanded away with ease.

CHARACTERISTIC / PROPERTY	UNIT:	SPECIFICATION:	DETAIL:
Surface Defects		<u>At given viewing distance and lighting:</u> Maximum contamination area equivalent to 1.0mm/m proportional to the sheet size under inspection. With a target of '0 defects'. <u>Example(s):</u> 1 Spot or group of spots not to exceed 1.0mm / m. Or simply - If eye immediately drawn to any surface variant / defect.	EN 438 // ANSI / NEMA LD3-2000
Performance Testing		Customer / Supplier agreed criteria from selected standards.	EN 438 // ANSI / NEMA LD3-2000
Non-Conforming Product		Edge defects, broken corners, contamination etc... will be inspected against standard AQL. Sheets will be rejected on individual merit and basis, however if over Acceptable Quality Level full pallet / batch / delivery may be rejected.

0 Rating - Staining reagent removed with a cellulose sponge moistened with water.

1 Rating - Staining reagent removed with a cellulose sponge moistened with water and commercial cleanser.

2 Rating - Staining reagent removed with a stiff nylon bristle brush with a commercial cleanser and baking soda.

3 Rating - Staining reagent removed with a cotton ball saturated with acetone.

4 Rating - Staining reagent removed with a cotton ball saturated with hypochlorite bleach.

5 Rating - Stains remaining after the previous cleaning steps are rated 5.

• = No Effect

NOTE: Cleaning and rating performed by NEMA LD 3 2000 protocol.
